Road playback, one synthetic route

Run c84e6df4-1c54-494e-b65c-ba2efa686867, state final, protocol road-playback-2.

App 0.4.0 to 0.4.5, backend 0.1.0, revision unavailable, uncommitted changes: True.

Device REVVL 6 Pro, Android 13. Fixture: Synthetic Berlin to Potsdam points; live Valhalla geometry, 31.21 km. Speed: 120 km/h.

Started None UTC, finished None UTC, monotonic duration None s.

Check	Expected	Tolerance	Observed	Result	Source	Basis
Fixes follow the selected road	On the geometry	1 m	Worst 0.063 m over 684 fixes (0.4.0); 0.054 m over 56 (0.4.4)	PASS	automated check	independent Android observation
Speed at 120 km/h	33.333 m/s	2%	33.333 m/s over 59.72 s; error 0.000%	PASS	automated check	independent Android observation
Speed at 60 km/h	16.667 m/s	2%	16.666 m/s over 180.33 s; error -0.001%	PASS	automated check	independent Android observation
Paused fixes	Speed 0, one position	Exact	54 fixes, one position per pause, speed 0.0, no bearing	PASS	automated check	independent Android observation
No position jump	Step within speed x gap	1.05 x	Largest ratio 1.003	PASS	automated check	independent Android observation
Mock flag preserved	Every fix flagged	All	All flagged	PASS	automated check	independent Android observation
Screen off	Fixes continue	Gap under 2 s	30 s, longest gap 1.03 s	PASS	automated check	independent Android observation
Draft changes leave session alone	Fixes stay on original road	1 m	290 fixes within 0.063 m	PASS	automated check	independent Android observation
Stop cleanup	No providers,	None left	0 mock providers, no service, lock	PASS	automated check	other

	service, or wake lock		released			
Force-stop	No restart, and recovery on relaunch	None	No restart. 3 providers stayed but produced no new fixes for 90 s; last known stayed a stale mock fix; relaunch removed them	PASS	automated check	independent Android observation
Offline withdrawal synchronizes	Delivered on reconnect or relaunch	n/a	Survived restart; delivered 5.0 s after reconnecting, and 4.3 s after relaunch	PASS	automated check	other
Low-memory process death	No restart	None	Could not be produced	NOT TESTED	manual observation	other
Delivery to another app	Other app receives fixes	n/a	Not measured	NOT TESTED	manual observation	other

Limitations

One physical phone, one route, one provider response. Polling sees most fixes, not necessarily all. Delivery to other apps not measured. Repeated phases are not independent routes.

Deviations

The main run was on 0.4.0. Road playback was repeated on 0.4.4 with fewer fixes and at 120 km/h only, and not on the final 0.4.5, which changed only the consent receipt format. No revision exists, as the source is uncommitted. Start and finish times were not recorded in this schema, so they are left empty.

Simulator state is not the same as observed delivery. Hashes detect change against a trusted manifest; they do not show that an observation is true.
